

HANDS-ON 1

1. Save a file <https://raw.githubusercontent.com/hpcleuven/Linux-intro/master/tabel.dat> to your computer in Downloads directory.
2. Connect to the cluster through NX (https://vlaams-supercomputing-centrum-vscdocumentation.readthedocs-hosted.com/en/latest/access/nx_start_guide.html?highlight=nomachine)
3. Open table.dat file in NX.
4. Connect to the cluster with putty/SSH or open a terminal in NX
5. Create a file that contains current date (`date >> date.txt`)
6. Run mc (`mc`)
7. In mc create the directory mytest
8. In mc copy date.txt into mytest dir/`date1.txt`
9. In mc move date.txt into mytest dir
10. In mc remove the read by others permission from date.txt (tab file, `chmod`)
11. In mc compress the directory mytest into mytest.tar.gz (use F2 menu)
12. In mc check the content of mytest.tar.gz
13. In mc remove mytest.tar.gz and mytest
