

HANDS-ON 1

1. Run desktop app on the cluster
2. Create a file that contains current date (`date >> date.txt`)
3. Run mc (`mc`)
4. In mc create the directory mytest
5. In mc copy date.txt into mytest dir/date1.txt
6. In mc move date.txt into mytest dir
7. In mc remove the read by others permission from date.txt (tab file, chmod)
8. In mc compress the directory mytest into mytest.tar.gz (use F2 menu)
9. In mc check the content of mytest.tar.gz
10. In mc remove mytest.tar.gz and mytest
